RTO Software Announces Free Tool that Enhances Citrix Presentation Server™ 4.0 Deployment

The RTO Optimization Console provides enhanced performance tuning and reporting for Citrix Memory Optimization Management

ATLANTA, GA – October 9, 2005 – RTO Software, provider of application-focused performance monitoring and management tools for any business-critical application for Windows server environments, today announced a new tool for Citrix Presentation Server™ 4.0 , TScale®, and TScale *Advanced* deployment – the RTO Optimization Console.

The RTO Optimization Console is a valuable tool for Citrix Presentation Server™ 4.0 deployment, giving you total control over the new Citrix Memory Optimization Management function. Citrix licensed RTO Software's patented server performance optimization technology for incorporation into Citrix Presentation Server™ 4.0. With the RTO Optimization Console, you have memory optimization tuning that is not available in Citrix Presentation Server, such as component exclusion list management, optimization history reporting, and optimization scheduling.

“The RTO Optimization Console leverages and extends the technology that Citrix licensed from RTO, providing additional tools for Citrix Presentation Server implementation”, said Kevin Goodman, President and CEO of RTO Software. “The Optimization Console reduces configuration complexity and implementation time, while improving overall performance of your server farm”.

The RTO Optimization Console is a multi-server, centralized management console that allows administrators to handle all installation, management, reporting and maintenance of TScale® and TScale *Advanced* across large server farms in a Citrix or Terminal Services environment. The Optimization Console also provides memory optimization tuning for Citrix Presentation Server 4.0, enhancing Citrix Presentation Server deployment.

The RTO Optimization Console is free for use when managing a local Citrix Presentation Server. The multiple server mode allows you to easily handle memory optimization for your entire Citrix Presentation Server farm from one location, and requires a license from RTO Software.

About RTO Software

RTO Software, Inc. is an established provider of application-focused performance monitoring and management tools. As an innovative leader in this rapidly growing area, RTO provides software solutions to enterprises and software firms that want to improve the performance and capacity of applications operating in a Windows environment. RTO's solutions are used on thousands of servers around the world in a variety of industries, including financial management, manufacturing, healthcare, telecommunications, and government. RTO Software is based in Alpharetta, Georgia. For more information visit <http://www.rtosoft.com>
