

**RTO Software enhances your investment in enterprise management tools.**

RTO Software solutions easily integrate with your environment. They are the products of choice for large vendors such as Symantec, VMware, Citrix, and Ericom who have chosen to OEM and integrate RTO's products with their own solutions. Shouldn't they be the choice for you?

## Other Solutions in RTO's High-Performance Family:

RTO Software offerings enable you to gain efficiencies and preempt application performance issues:

- **RTO PinPoint®** - provides real-time performance and critical-path monitoring, root-cause analysis and end-to-end visibility of applications.
- **RTO TScale®** - increases application performance and reliability through application shaping and resource optimization (CPU, memory, paging).
- **RTO Virtual Profiles™** - eliminates user profile data corruption problems, enhances user flexibility, and delivers faster logons.

## About RTO Software

Founded in 2000, RTO Software is a global provider of application availability and management solutions for business-critical applications. RTO offers extensive discovery, mapping, inventory, monitoring and acceleration capabilities for business-critical applications across an enterprise. RTO Software's solutions help increase the business value of IT organizations, maximize application investments and deliver consistently superior user experiences in many industries including financial services, healthcare, telecommunications and government.

# rto Discover®

Get an accurate view of your entire physical and virtual infrastructure. Any time.

Now you can get consistent and comprehensive information about your entire enterprise IT infrastructure—accurately and automatically—with RTO Discover®.

Applications. Hardware. Firewalls. Subnets. Technology types. Licenses. You name it, RTO Discover provides accurate information about assets and applications, and alerts you to deployment issues that may be impacting application performance. Finally, comprehensive and up-to-date information is just clicks away!

### Know the Truth About Your Infrastructure

RTO Discover provides a complete picture of your IT assets—from an enterprise-wide view, to the business-unit level, right down to an individual component. This single, scalable resource is a powerful solution for performing vital functions:

- Asset inventory and discovery of applications, networks and devices
- Configuration audits and license tracking

### Benefit from Automating Manual, Time-intensive Processes

RTO Discover slashes the time and effort required to obtain and manage all the vital details about your enterprise

IT infrastructure. At the same time, it produces highly accurate results by helping you to:

- Eliminate the expensive approach of managing your IT environment by silos.
- Replace the time-consuming use of spreadsheets, desktop graphical tools or proprietary tools to map infrastructure components.
- Gain reliable knowledge to justify and prioritize IT expenditures.
- Easily manage asset assignment and license compliance.

### Understand What's on Your Physical Desktops on the Way to Virtualizing

Before embarking on a VDI pilot, you need to inventory your current hardware resources, identify applications being used across the enterprise and dependencies among them, and audit license utilization and deployment. Basically, you need to ask what's out there now. RTO Discover automates this discovery process and helps you overcome the challenge of knowing which applications to build into each virtual desktop image.

## Quickly transform the way you view your infrastructure.

RTO Discover® provides automated management of critical information about your IT infrastructure:

- Asset Inventory and Discovery
- Configuration Detection and Audit
- License Tracking

### Gain Immediate, Comprehensive Details About All Your Software and Applications

Current and complete information about all applications, including home-grown and custom software, is as near as your screen: versions installed, patch levels, license keys and more.

### Get Aggregated and Localized Pictures of Your Physical or Virtual Devices and Hardware

From servers to routers to CPUs, RTO Discover reveals crucial details about these components in all locations: technology type, model numbers, manufacturer, disc capacity, operating systems and more.

- **Quickly map any and all applications in your enterprise** – For instance, RTO Discover can show you all the business-critical applications that are virtualized, whether server or desktop.
- **Know what hardware and devices are installed in your infrastructure** – Instantly zoom into the equipment or device and get all the particulars you need to see.
- **Identify critical-path issues that impact performance** – With tight integration to RTO PinPoint, you can uncover critical traffic patterns that affect performance.
- **Schedule automatic updates of your infrastructure data** – Instruct RTO Discover to harvest all your infrastructure information on your schedule.

### Understand Your Configuration as it Exists Today

Tame the overwhelming complexity of a constantly changing IT infrastructure. RTO Discover gives you a total, up-to-date grasp of where it stands. Discover allows you to perform configuration audits as a guide for standardization. You can compare configuration parameters across the entire enterprise for all your infrastructure components, highlight deviations and determine potential standardization opportunities.

### Make Simple Work of Asset Inventory

What routers are installed across your network? Which applications are being used in your physical and virtual locations? Now reliable answers are instantaneously available—and critical to a number of issues.

- Provide reliable asset inventory for optimum management, IT spending priorities, etc.
- Ensure an auditable inventory process.
- Drastically cut hours/costs required for manual inventory.

### Get Compliant with Up-to-date License Information

RTO Discover automates and simplifies the process of managing usage compliance and licensing agreements. The resulting information can avoid costly regulatory violations and save your organization thousands of dollars.

- Identify applications that are actually in use.
- Determine optimum licensing models.
- Ensure compliance by keeping licenses up to date.

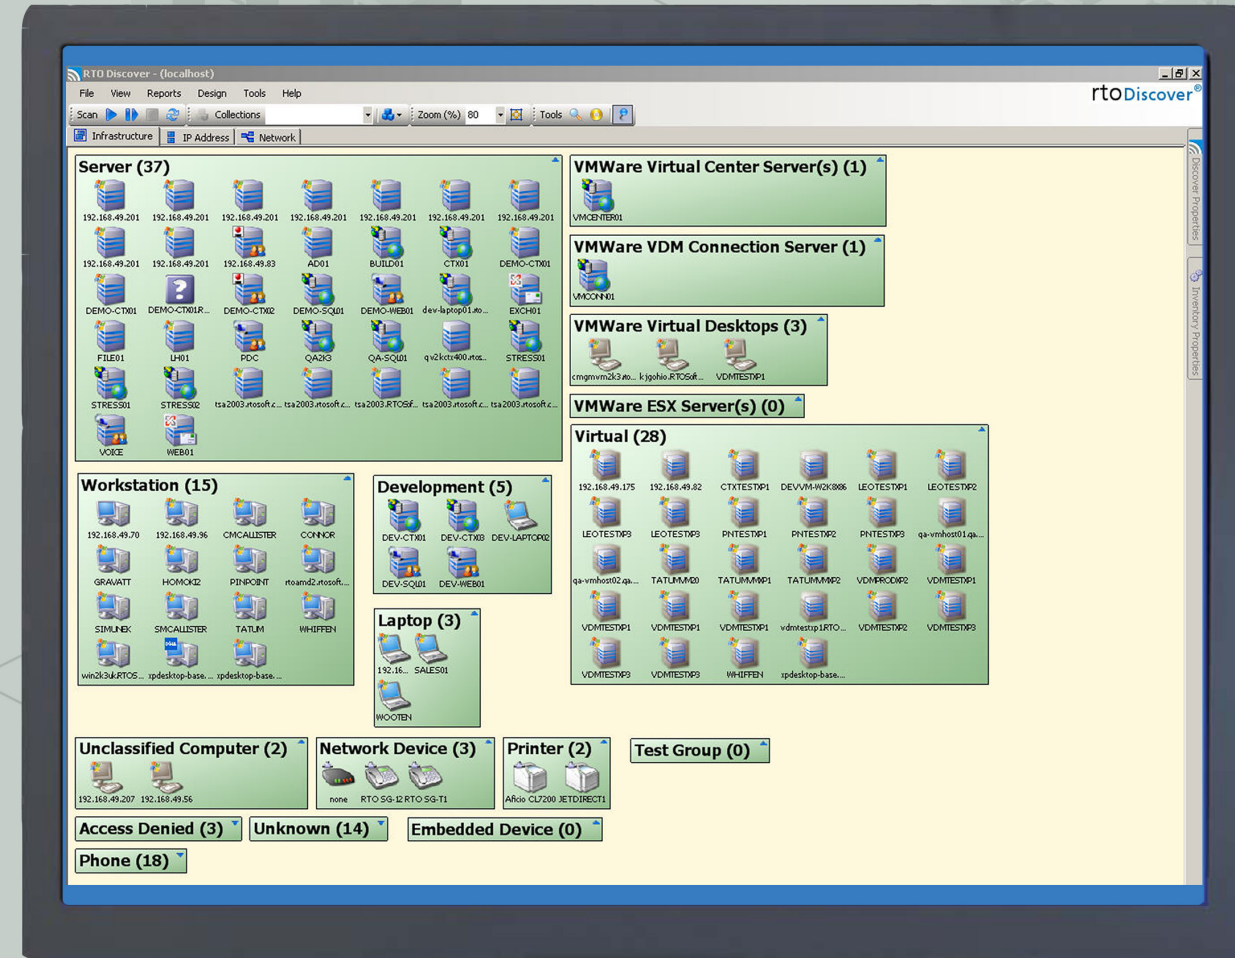

### Justify Your IT Spend

Continuously updated views of your IT infrastructure help you gain significant cost savings and make intelligent business decisions about IT projects.

- Use reliable and current data to negotiate better vendor prices.
- Reduce support costs by eliminating non-standard components.
- Remove unused software to reduce license costs.
- Gather insight for “Physical or virtual?” decisions based on facts, especially when Discover data is coupled with user experience performance data.
- Discover ways to consolidate components to maximize the value of your IT investments.
- Use accurate infrastructure information to set IT priorities.
- Balance repurchase costs against maintenance updates.

*“Discover gives us the ability to track where software is installed easily and efficiently. When [physical or virtual] workstations need replacing, we know exactly what was on the old so we can make identical replications for the new.”*

*Jim Kenzig, Cuyahoga County Public Library*

RTO Discover® provides consistent, aggregated information about your entire enterprise IT infrastructure.

*Automate the process of performing enterprise-wide configuration audits, asset inventory and license tracking. From managing compliance requirements to monitoring deployments and migrations, RTO Discover® saves you time, effort and expense.*

The Benefits of Knowing your IT Infrastructure with RTO Discover®:

- Enables easy access to information about your entire IT infrastructure
- Eliminates costly, manual processes
- Provides visibility into configuration & application relationships that can impact application performance
- Maintains accurate asset inventory
- Supports better IT spending decisions
- Helps assure licensing compliance
